

Tuesday the 5th of March

Design and Technology Incursion

"The Incursion was fun. I liked how we could rebuild the robot after taking it apart." - Han 3/4A

.....

Grade 3 and 4 incursion

On Tuesday, March 5th, students participated in an incursion that strengthened their problem-solving skills and sparked creativity. Students worked in groups with classmates they typically don't partner with. Together, they made marble runs with patterns, took apart and built toy trains, cars, and robots, and figured out how simple machines work by experimenting.

It was wonderful to see all students working together to problem solve. They used their imagination and faced challenges that helped them learn. Overall, it proved to be an enjoyable hands-on learning adventure that left a smile on the face of every student.

"I liked building the racecar. I also liked putting the robot together, it looked funny. It was challenging working as a team but we all eventually worked really well." - Jeremiah 3/4B
